**London, Ontario** Adescor Inc. is pleased to announce a licensing agreement with Mecasoft of Sultz, France for the exclusive manufacturing and support of the Mecasoft coilers in the American market.

Mecasoft is a European leader in automatic coiling technology, with over 130 machines installed in corrugated and solid wall pipe plants. Mecasoft have two machines in North America, and with this new manufacturing and support agreement expects the coiler technology to make much better penetration into the market.

Adescor, with machinery manufacturing in Exeter, Ontario have the capacity to build the machinery and customers who are looking for a North American made and supported coiler solution. Adescor will be substituting North American electro-mechanical components on the machines allowing for local supply of typical maintenance parts. The first unit to be built has been sold, so Adescor plan on building a second at the same time, the two machines should be ready by late summer.

“This method of adding new designs to Adescor speeds up our launch of new technology, and reduces our risk in the development of a new process” states Tony Kime, partner in Adescor Inc. “Why start from scratch when we can access a known and proven technology that has been used successfully many times over”.

Pipe manufacturers in North America have been looking at automatic coilers for many years, but the step to buy a European design is a hesitant one. People understand the potential benefit, but the “down time” is a big concern for many prospective buyers. “With Adescor’s reputation in North America, competent service technicians, and the incorporation of off the shelf American components, we hope to reduce the hesitation of many prospective buyers” states Bill Kime, President of Adescor Inc.

The Mecasoft coilers are designed in many configurations, in both single and double reel winding. They are equipped with automatic cutting, pipe feeding, winding and strapping systems and can also include stretch wrapping and automatic pull string blowing. The coiler has been adapted to many customer needs and has tremendous flexibility in features offered.

Adescor is a privately held company located in Exeter Ontario specializing in downstream and accessory equipment for corrugated pipe plants. Many of the major corrugated pipe producers in North America are customers of Adescor.

More information about the Adescor products can be obtained by visiting their agents web site at [www.profilepipe.com](http://www.profilepipe.com) or by calling Tony Kime at (819) 689-2100.
